Assignment 5
CSCI 3508 001
SEPA: 8.2

8.2. An analysis rule of thumb is that the model "should focus on requirements that are visible within the problem or business domain." What types of requirements are *not* visible in these domains? Provide a few examples.

1. Implementation of the network communication aspect of the application
2. Behavior, functions and Performance characteristics
3. Operating system being used
4. The external events like data input and output
5. Infrastructure implementation
6. Classes needed for implementations
